^{*12-}month rolling performance figure

*2 The Fund can invest portions of its assets into underlying foreign investments (incl. investments into Africa). This would mainly be achieved by investing into the sub-funds of the M&G (South Africa) Global Funds ICAV and the M&G Africa Equity Fund. These funds will charge an additional asset management fee which is included in the Fund's NAV and the Fund's TER. The Manager receives a marketing and distribution fee in respect of the M&G (South Africa) Global Funds.

**The Figure 1 Advisor Service Fee 15 applicable is included in 1440 (Service Fee) in policies for included in 1440 (Service Fee).

³ The Financial Adviser Service Fee, if applicable, is included in M&G's annual management

Fund commentary

In March, US President Donald Trump postponed the implementation of 25% tariffs he had imposed on Canada and Mexico after markets tumbled on fears of their effect on inflation. US consumer spending, which makes up two thirds of the US economy, fell by 0.2% in January after a 0.8% increase in December, raising fears that consumers are cutting back on spending due to political uncertainty. US CPI declined to 2.8% y/y in February from 3.0% y/y in January; however, some market observers believe this level is temporary as long-term inflation expectations jumped to a 32-year high. The UK saw Labour Chancellor Rachel Reeves deliver her Spring Statement, announcing a £4.8 billion cut in welfare spending, as well as a crackdown on tax avoidance and trimmed the growth forecast to 1% in 2025. UK CPI eased to 2.8% y/y in February, down from 3.0% y/y in January. European markets experienced volatility due to tariff concerns and trade tensions, but hopes for a European-led peace initiative concerning Ukraine lifted sentiment and helped the FTSE100 reach a record high. Political stability following Germany's elections also boosted markets. The ECB cut interest rates by a quarter of a percentage point to 2.5%, leaving the door open to more cuts. The central bank cut its economic growth forecast for the eurozone to 0.9% for 2025.

In China, the People's Bank of China (PBOC) maintained its key lending rates, keeping the one-year Loan Prime Rate (LPR) at 3.1% and the five-year LPR at 3.6%. All enthusiasm boosted Chinese tech stocks, but tariff threats dragged on performance. In Japan, the announcement of a 25% tariff by the US on auto imports sparked major concerns due to the country's large auto export sector. Trade tensions and tariffs continued to contribute to market volatility. In addition, public dissatisfaction with fiscal policies erupted in protest action against the Ministry of Finance. On the local front, the economy stabilised in Q4 2024 having expanded by 0.6% following a contraction of 0.1% in Q3 2024. The coalition's first National Budget Speech was well-received and sparked positive sentiment in markets, while tariff concerns weighed on performance. The FTSE/JSE All Share Index returned 3.6% in March, while Listed Property (FTSE/JSE All Property Index) posted -1.5%. The FTSE/JSE All Bond Index returned 0.2%, inflation-linked bonds (the Composite ILB Index) were flat, and cash as measured by the STeFI Composite Index delivered 0.6%. Looking at global market returns (in US\$), the MSCI All Country World Index delivered -3.9%, the Bloomberg Global Aggregate Bond Index returned 0.6%, while the FTSE EPRA/NAREIT Global REIT Index posted -2.4%. The rand strengthened 0.5% against the US dollar, but weakened 3.2% against the euro and 1.9% against the pound sterling.

Contributing the most to absolute performance for the month was the fund's exposure to SA equities (excluding property).

Glossary

Glossary	
12-month yield	A measure of the Fund's income distributions as a percentage of the Fund's net asset value (NAV). This is calculated by summing the income distributions over a rolling 12-month period, then dividing by the sum of the NAV at the end of the period and any capital gains distributed over the same period.
Annualised performance	The average amount of money (total return) earned by an investment each year over a given time period. For periods longer than one year, total returns are expressed as compounded average returns on a yearly basis.
Cumulative performance graph	This illustrates how an initial investment of R100 or N\$100 (for example) placed into the Fund would change over time, taking ongoing fees into account, with all distributions reinvested.
Income distribution	The dividend income and/or interest income that is generated by the underlying Fund investments and that is periodically declared and distributed to investors in the Fund after all annual service fees.
Information ratio	Measures the Fund's active return (Fund return in excess of the benchmark) divided by the amount of risk that the manager takes relative to the benchmark. The higher the information ratio, the higher the active return of the Fund, given the amount of risk taken and the more consistent the manager. This is calculated over a 3-year period.
Intended maximum limits	This indicates the Fund's intended maximum exposure to an asset class. These limits may be reviewed subject to the Fund's Supplemental Deed and/or Regulation 28 for those Funds managed in accordance with Regulation 28 of the Pension Funds Act.
Maximum drawdown	The largest drop in the Fund's cumulative total return from peak to trough over any period.
Monthly volatility (annualised)	Also known as standard deviation. This measures the amount of variation or difference in the monthly returns on an investment. The larger the annualised monthly volatility, the more the monthly returns are likely to vary from the average monthly return (i.e. the more volatile the investment).
Percentage of positive rolling 12 months	The percentage of months, since inception, that the Fund has shown a positive return over a rolling 12-month period.
Regulation 28	The South African retirement fund industry is governed by the Pension Funds Act, No 24 of 1956. Regulation 28 of the Pension Funds Act prescribes the maximum limits in asset classes that an approved retirement fund may invest in.
Sharpe ratio	The Sharpe ratio is used to measure how well the return of an asset compensates the investor for the risk taken. The higher the Sharpe ratio the better the Fund's historical risk-adjusted performance has been. This is calculated by taking the difference between the Fund's annualised return and the risk-free (cash) rate, divided by the standard deviation of the Fund's returns. This is calculated over a 3-year period.
Sortino ratio	This is calculated by taking the difference between the Fund's annualised return and the risk-free (cash) rate, divided by the downside deviation of the Fund's returns i.e. the "bad" volatility. A high Sortino ratio indicates a low risk of large losses occurring in the Fund. This is calculated over a 3-year period.
Total Expense Ratio (TER)	This shows the charges, levies and fees relating to the management of the portfolio and is expressed as a percentage of the average net asset value of the portfolio, calculated for the year to the end of the most recent completed quarter. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER cannot be regarded as an indication of future TERs.
Transaction Costs (TC)	The percentage of the value of the Fund incurred as costs relating to the buying and selling of the Fund's underlying assets. Transaction costs are a necessary cost in administering the Fund and impacts Fund returns. It should not be considered in isolation as returns may be impacted by many other factors over time including market returns, the type of Fund, investment decisions of the investment manager and the TER.
Total Investment Charges (TIC)	The percentage of the value of the Fund incurred as costs, relating to the investment of the Fund. As fund returns are reported after deducting all fees and expenses, these costs (the TER, TC & TIC) should not be deducted from the fund returns.
Unit Classes	M&G's funds are offered in different unit classes to allow different types of investors (individuals and institutions) to invest in the same fund. Different investment minimums and fees apply to different unit classes. A Class: for individuals only. B & D Class: retirement funds and other large institutional investors only. X Class: the special fee class that was made available to investors that were invested in the Dividend Income Feeder Fund. T Class: for investors in tax-free unit trusts. F Class: for Discretionary Fund Managers

F Class: for Discretionary Fund Managers

Disclaimer

MandG Investments Unit Trusts (South Africa) (RF) Ltd (Registration number: 1999/0524/06) is an approved CISCA management company (#29). Assets are managed by MandG Investment Managers (Pty) Ltd, which is an approved discretionary Financial Services Provider (#45199). The Trustee's/Custodian details are: Standard Bank of South Africa limited - Trustees Services & investor Services. 20th Floor, Main Tower, Standard Bank Centre, Heerengracht, Cape Town.

Collective Investment Schemes (unit trusts) are generally medium-to long-term investments. Past performance is not necessarily a guide to future investment performance. Unit trust prices are calculated on a net asset value basis. This means the price is the total net market value of all assets of the unit trust fund divided by the total number of units of the fund. Any market movements – for example in share prices, bond prices, money market prices or currency fluctuations – relevant to the underlying assets of the fund may cause the value of the underlying assets to go up or down. As a result, the price of your units may go up or down. Dunit trusts are traded at the ruling forward price of the day, meaning that transactions are processed during the day before you or the Manager know what the price at the end of the day will be. The price and therefore the number of units involved in the transaction are only known on the following day. The unit trust fund may borrow up to 10% of the fund value, and it may also lend any scrip (proof of ownership of an investment instrument) that it holds to earn additional income. A M&G unit trust fund may consist of different fund classes that are subject to different fees and charges. Where applicable, the Manager will payyour financial adviser an agreed standard ongoing adviser fee, which is included in the overall costs of the fund. A unit trust summary with all fees and maximum initial and ongoing adviser fee, which is included in the overall costs of the fund. A unit trust summary with all fees and maximum initial and ongoing adviser fee, which is included in the overall costs of the fund. A unit trust summary with all fees and maximum initial and ongoing adviser fees is available on our website. One can also obtain additional information on M&G products on the M&G website. The Fund may be restricted due to relative market sizes and market conditions. The fund's ability to settle securities may be adversely affected for multiple reasons including market conditions, macro-e

⁵ If the income earned in the form of dividends and interest exceeds the total expenses, the Fund will make a distribution (cpu = cents per unit).
