Transaction Costs (TC) <sup>4</sup>	0.10%	0.10%
Total Investment Charges (TIC)	1.83%	1.48%

## Risk profile

◀ Risk of not earning meaningful inflation-beating returns over the long-term

Variability of returns over the short-term ▶

## Fund facts

### Fund objective

The Fund is priced in rands and its objective, expressed in US dollar terms, is to outperform global inflation while aiming to preserve capital over the medium term.

### Investor profile

Investors seeking to preserve the real value of their capital, in US dollar terms, by investing in a diversified portfolio of global assets. The recommended investment horizon is 3 years or longer. Since units are priced in rands, investors can invest without having to expatriate rands.

### Investment mandate

The Fund is a feeder fund and, other than assets in liquid form and currency contracts, invests only in one fund – the M&G Global Inflation Plus Fund, a US dollar denominated fund domiciled in Ireland. Through this underlying fund, the Fund has exposure to a diversified portfolio that may include equity and property securities, cash, bonds and commodities. The Fund may invest up to 40% in equity securities (excl. property) and up to 25% in property securities.

### Investment manager of the underlying fund

M&G Investment Management Ltd (UK)

### Fund managers of the underlying fund

Craig Simpson  
Aaron Powell

### ASISA category

Global - Multi-Asset - Low Equity

### Benchmark

Global inflation

### Inception date

1 March 2004

### Fund size

R179 143 621

### Awards

Raging Bull: 2019, 2021

<sup>1</sup> The Fund's benchmark changed from the ASISA Global - Multi Asset - Low Equity Category Mean to Global Inflation on 1 November 2018.

<sup>2</sup> 12-month rolling performance figure

<sup>3</sup> Additional underlying foreign fund fees are dependent on the fund and are included in the TER

<sup>4</sup> Where a transaction cost is not readily available, a reasonable best estimate has been used. Estimated transaction costs may include Bond, Money Market, and FX costs (where applicable).

## Fund commentary

Global stocks, as measured by the MSCI ACWI, reached an all-time high in June, driven largely by the performance of the US, and technology stocks in particular. In fixed income, developed market government bonds generally recorded positive returns, although French sovereign bonds were one notable exception. In the US, the Federal Reserve (the Fed) held rates and revised down the number of cuts it expects this year from three to one. US Q1 GDP was revised down to 1.3% from a previous reading of 1.6%, with US consumers holding back on spending, particularly on big ticket items. Meanwhile, US CPI softened to 3.3% y/y in May versus expectations of 3.4%. In the UK, CPI returned to its 2% target for the first time in almost three years, down from 2.3% y/y in April. As expected, the BOE voted to hold rates at 5.25% in June with a rate cut expected in August. Turning to the Eurozone, the ECB cut the deposit interest rate from 4.0% to 3.75%, but acknowledged that the fight against inflation was far from having been won. Eurozone CPI came in at a higher-than-expected 2.6% y/y in May, up from 2.4% in April.

China's softer-than-expected CPI rose 0.3% y/y in May, below expectations of 0.4%. Meanwhile, major Chinese property data worsened despite efforts to prop up the sector. China's robust GDP grew by 5.3%/y/y in Q1 2024, beating the 4.6% estimate. In Japan, the BOJ remained cautious and patient around the timing of the next rate hike. A sharp downgrade of Q1 GDP to -2.9% from an earlier estimate of -1.8% is expected to affect the BOJ's forecasts and forthcoming rate decision. Looking at global market returns in June (in US\$), the MSCI All Country World Index delivered 2.3%, the Bloomberg Global Aggregate Bond Index returned 0.1%, while the FTSE EPRA/NAREIT Global REIT Index posted 1.2%. The rand strengthened 3.0% against the US dollar, 4.3% against the euro and 3.7% against the pound sterling.

Rand strength against the US dollar tempered performance in June. In US dollar terms, exposure to equities and fixed income were the main contributors to returns. Within equities, our core exposure to global equities identified using machine learning techniques, together with our tactical positions, were beneficial to performance. Within the core exposure, style exposure as well as stock selection detracted from relative performance over the month. Within style, exposure to high residual volatility and smaller size companies were the key detractors to relative performance. In terms of our tactical positions, holdings in Asia ex Japan and the US, helped returns. Conversely, exposure to Latin America cost some performance. Gains in the fixed income allocation were due to the performance of the core exposure and tactical positions. Our broad investment theme remains in place, with the fund being defensively positioned, with a long interest rate and a short credit risk bias. Credit spreads remain extremely tight and offer little value, in our view, although this month saw some weakness in French banks. In terms of tactical positions, long dated US Treasuries was the main contributor to performance. Property exposure had a small positive impact on absolute returns.

## Glossary

<b>12-month yield</b>	A measure of the Fund's income distributions as a percentage of the Fund's net asset value (NAV). This is calculated by summing the income distributions over a rolling 12-month period, then dividing by the sum of the NAV at the end of the period and any capital gains distributed over the same period.
<b>Annualised performance</b>	The average amount of money (total return) earned by an investment each year over a given time period. For periods longer than one year, total returns are expressed as compounded average returns on a yearly basis.
<b>Cumulative performance graph</b>	This illustrates how an initial investment of R100 or N\$100 (for example) placed into the Fund would change over time, taking ongoing fees into account, with all distributions reinvested.
<b>Income distribution</b>	The dividend income and/or interest income that is generated by the underlying Fund investments and that is periodically declared and distributed to investors in the Fund after all annual service fees.
<b>Information ratio</b>	Measures the Fund's active return (Fund return in excess of the benchmark) divided by the amount of risk that the manager takes relative to the benchmark. The higher the information ratio, the higher the active return of the Fund, given the amount of risk taken and the more consistent the manager. This is calculated over a 3-year period.
<b>Maximum drawdown</b>	The largest drop in the Fund's cumulative total return from peak to trough over any period.
<b>Monthly volatility (annualised)</b>	Also known as standard deviation. This measures the amount of variation or difference in the monthly returns on an investment. The larger the annualised monthly volatility, the more the monthly returns are likely to vary from the average monthly return (i.e. the more volatile the investment).
<b>Percentage of positive rolling 12 months</b>	The percentage of months, since inception, that the Fund has shown a positive return over a rolling 12-month period.
<b>Sharpe ratio</b>	The Sharpe ratio is used to measure how well the return of an asset compensates the investor for the risk taken. The higher the Sharpe ratio the better the Fund's historical risk-adjusted performance has been. This is calculated by taking the difference between the Fund's annualised return and the risk-free (cash) rate, divided by the standard deviation of the Fund's returns. This is calculated over a 3-year period.
<b>Sortino ratio</b>	This is calculated by taking the difference between the Fund's annualised return and the risk-free (cash) rate, divided by the downside deviation of the Fund's returns i.e. the "bad" volatility. A high Sortino ratio indicates a low risk of large losses occurring in the Fund. This is calculated over a 3-year period.
<b>Total Expense Ratio (TER)</b>	This shows the charges, levies and fees relating to the management of the portfolio and is expressed as a percentage of the average net asset value of the portfolio, calculated for the year to the end of the most recent completed quarter. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER cannot be regarded as an indication of future TERs.
<b>Transaction Costs (TC)</b>	The percentage of the value of the Fund incurred as costs relating to the buying and selling of the Fund's underlying assets. Transaction costs are a necessary cost in administering the Fund and impacts Fund returns. It should not be considered in isolation as returns may be impacted by many other factors over time including market returns, the type of Fund, investment decisions of the investment manager and the TER.
<b>Total Investment Charges (TIC)</b>	The percentage of the value of the Fund incurred as costs, relating to the investment of the Fund. As fund returns are reported after deducting all fees and expenses, these costs (the TER, TC & TIC) should not be deducted from the fund returns.
<b>Unit Classes</b>	M&G's funds are offered in different unit classes to allow different types of investors (individuals and institutions) to invest in the same fund. Different investment minimums and fees apply to different unit classes. A Class: for individuals only. B & D Class: retirement funds and other large institutional investors only. X Class: the special fee class that was made available to investors that were invested in the Dividend Income Feeder Fund. T Class: for investors in tax-free unit trusts. F Class: for Discretionary Fund Managers.

<sup>5</sup> If the income earned in the form of dividends and interest exceeds the total expenses, the Fund will make a distribution (cpu = cents per unit).

## Disclaimer

**MandG Investments Unit Trusts (South Africa) (RF) Ltd** (Registration number: 1999/0524/06) is an approved CISA management company (#29). Assets are managed by MandG Investment Managers (Pty) Ltd, which is an approved discretionary Financial Services Provider (#45199). The Trustee/Custodian details are: Standard Bank of South Africa limited – Trustees Services & Investor Services, 20th Floor, Main Tower, Standard Bank Centre, Heerengracht, Cape Town.

Collective Investment Schemes (unit trusts) are generally medium- to long-term investments. Past performance is not necessarily a guide to future investment performance. Unit trust prices are calculated on a net asset value basis. This means the price is the total net market value of all assets of the unit trust fund divided by the total number of units of the fund. Any market movements – for example in share prices, bond prices, money market prices or currency fluctuations – relevant to the underlying assets of the fund may cause the value of the underlying assets to go up or down. As a result, the price of your units may go up or down. Unit trusts are traded at the ruling forward price of the day, meaning that transactions are processed during the day before you or the Manager know what the price at the end of the day will be. The price and therefore the number of units involved in the transaction are only known on the following day. The unit trust fund may borrow up to 10% of the fund value, and it may also lend any scrip (proof of ownership of an investment instrument) that it holds to earn additional income. A M&G unit trust fund may consist of different fund classes that are subject to different fees and charges. Where applicable, the Manager will pay your financial adviser an agreed standard ongoing adviser fee, which is included in the overall costs of the fund. A unit trust summary with all fees and maximum initial and ongoing adviser fees is available on our website. One can also obtain additional information on M&G products on the M&G website. The Fund may hold foreign securities including foreign CIS funds. As a result, the fund may face material risks. The volatility of the fund may be higher and the liquidity of the underlying securities may be restricted due to relative market sizes and market conditions. The fund's ability to settle securities and to repatriate investment income, capital or the proceeds of sales of securities may be adversely affected for multiple reasons including market conditions, macro-economic and political circumstances. Further, the return on the security may be affected (positively or negatively) by the difference in tax regimes between the domestic and foreign tax jurisdictions. The availability of market information and information on any underlying sub-funds may be delayed. The Manager may, at its discretion, close your chosen unit trust fund to new investors and additional investments by existing investors to make sure that it is managed in accordance with its mandate. It may also stop your existing debit order investment. The Manager makes no guarantees as to the capital invested in the fund or the returns of the fund. Excessive withdrawals from the fund may place the fund under liquidity pressure and, in certain circumstances, a process of ring fencing withdrawal instructions may be followed. Fund prices are published daily on the M&G website. These are also available upon request. The performance is calculated for the portfolio. Individual investor performance may differ as a result of initial fees, the actual investment date, the date of reinvestment and dividend withholding tax. Purchase and repurchase requests must be received by the Manager by 13h30 (11h30 for the Money Market Fund) SA time each business day. All online purchase and repurchase transactions must be received by the Manager by 10h30 (for all Funds) SA time each business day.
